What started as a faster, easier method for getting water and fuel to troops on the front lines in World War I was quickly adapted and applied to water and wastewater treatment piping systems. Product innovations developed by Victaulic are designed to reduce the effort and challenges associated with pipe joining systems.

Reliable, easy-to-install systems provide piping designers with flexible and rigid mechanical joints and flow control solutions that require less space while providing a union at every joint for easy system access. Ranging from ½"/15mm to over 144"/3650mm, Victaulic creates pipe joining solutions designed to address the challenges contractors, engineers and installers face every day.

- **Filtration**
- **Intake Lines**
- **Influent**
- **Secondary Treatment**
- **Preliminary Treatment**
- **Pump & Lift Stations**
- **Tertiary Treatment**
- **High Pressure Pump Stations**
- **Wells, Reservoirs and Dams**
- **Water Transmission**

**Applications**

**Approvals/Compliances**

- AWWA
- UL
- NSF
- FM

**Committees/ Members of**

- AFSA
- NFPA
- NFSA
- SFPE

**Members of**

- AWWA
- WEF
- ASCE
- IDA

**Solutions and Services**

- Inspection Services
- Engineered Products
- Customer Training
- BIM Modeling
- Cutting Edge Revit Software
- Project Management Services

**Notable Projects Include**

- Hoover Dam
- Charles E. Meyer Desalination Plant
- Hanlan Water Project - Region of Peel
- Avrasya Mentro Tunnel
- Savannah Harbor Expansion
- Varennes Water Treatment Plant
- Dongjiakou Desalination Plant
- Wakaw Water Treatment Plant
